

ASSET MANAGEMENT FUNDAMENTALS

PCS-AMAN-01

\$799 AUD excl. GST

OVERVIEW

What is Asset Management anyway? Well, it can be defined in several ways, but at its core is a business plan for the services that asset-intensive organisations provide to their business. It's about utilising Asset Management methodologies to understand what assets a business has, how much it costs to run them, and at what standard and capacity, and how they will be maintained in a cost-effective manner across an assets life cycle. If you want to understand Asset Management holistically, why it matters to organisations and their stakeholders this course will provide you with a fundamental appreciation.

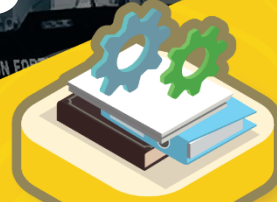

This course is generic, however, the International Organisation for Standardisation series of standards ISO 55000/55001/55002 have been used as a benchmark.

Designed for any person seeking to learn the fundamentals of Asset Management. If you work in Asset Management, we highly recommend this course for you.

All AMLA online courses can be completed in your own time and at your own pace with the assistance of course forums, online chat, and email. Courses are accessible for 12 months from enrolment.
